FSC Certified Wood Products

On November 7, 2011, Taan Forest successfully achieved Forest Stewardship Council®, Forest Management Certification (FSC® FM) for all of its forestry and harvesting operations on Haida Gwaii, BC, and Forest Stewardship Council, Chain of Custody (FSC CoC) for wood products manufacturing and sales.

For your lumber and log requirements, you can now be assured of not only access to some of the most beautiful wood products the coast of BC can offer but the additional certainty of sourcing from truly sustainable forests of Haida Gwaii.

Taan Forest can now provide a very positive impact on environmentally responsible wood product consumption by providing builders, architects, specialty distributors and manufacturers of fine wood crafts with access to a wide range of BC coastal lumber products and finished softwood building materials that may have been difficult to source in the past.

Whether it's simply the peace of mind that comes with building your backyard project with wood that has met the world's most stringent sustainability standards or the need to provide complete Chain of Custody documentation while applying for LEED certified wood credits, Taan Forest's 100% FSC certified products are now available.

All wood product manufacturing is carefully tailored to the specific needs of end customers. This process starts with selecting the log sort that best matches the finished wood product and continues through the carefully monitored primary custom sawmilling stage often involving secondary processing, kiln drying, profiling, and protective packaging.

While the demand for environmentally sustainable wood products continues to grow, Taan Forest understands your needs to have consistent supply and quality products. We invite all product inquiries to sales@taanforest.com.

Together we will strive to find most sensible solution for servicing your FSC certified wood product needs.
